

SAFFRON

TYPES OF SAFFRON

SUPER NEGIN

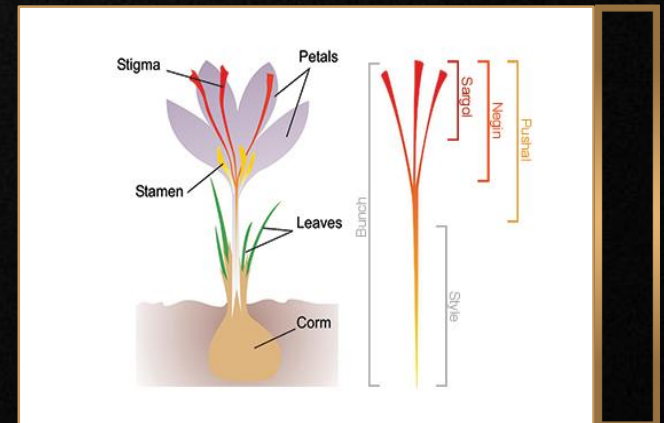

NEGIN

SARGOL

PUSHAL

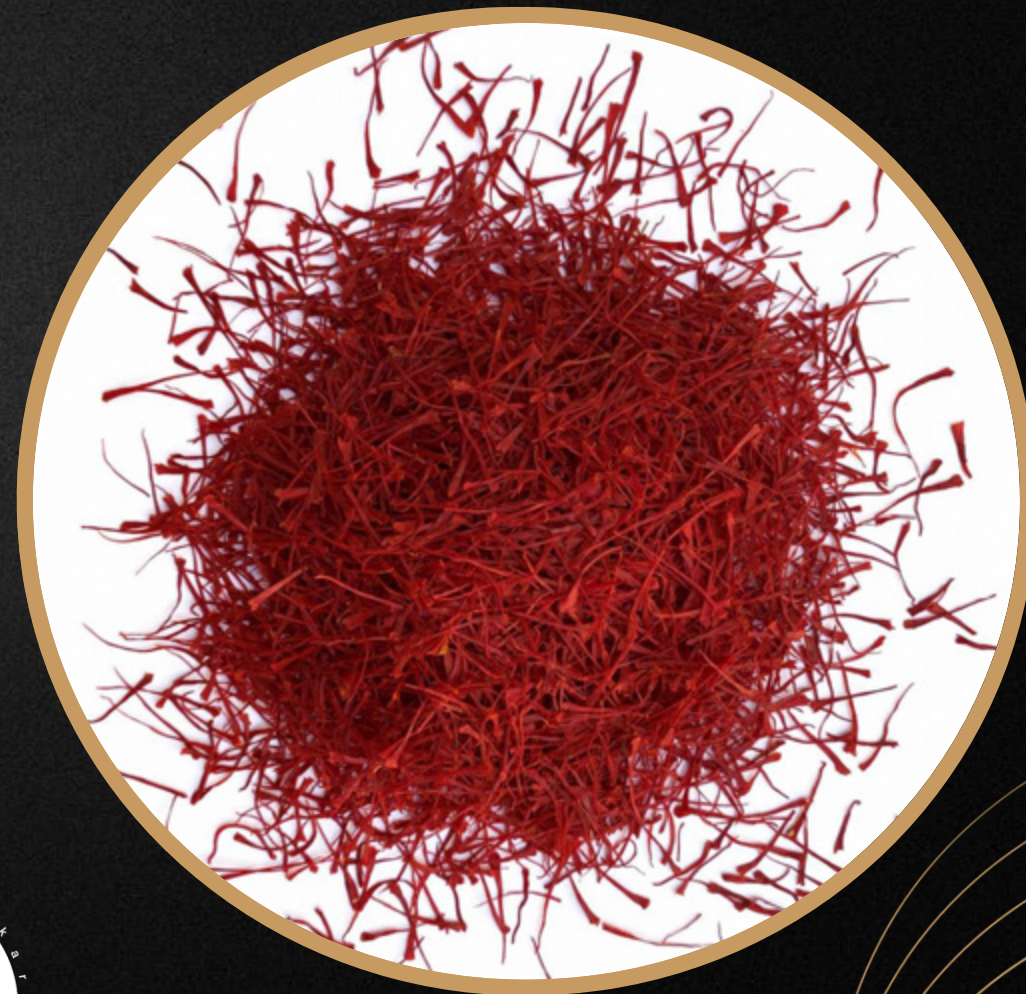

SUPER NEGIN

The best quality type of saffron in the world, Super Negin Saffron is the premium all red saffron. While not much different from Negin Saffron, Super Negin saffron has a bit larger threads.

NEGIN

Negin Saffron is also one of the best quality types of saffron that is produced from grade 1 saffron and contains only the red parts of the stigma.

SARGOL

Sargol Saffron only contains the red parts of the stigma but the threads are shorter than Negin and Super Negin Saffron. The three stigmas of a flower are also not connected to the style in Sargol.

PUSHAL

Like Sargol, Pushal Saffron also has the red parts of saffron stigma. The difference is that Pushal threads contain a bit of the yellow style as well. So, the coloring power is lower than Super Negin, Negin, and Sargol saffron. Note that while Pushal saffron has yellow styles.
